

# SCORECHEK

## How it Works

Deliver perfectly manufactured boxes to your customers by inspecting and ensuring the integrity of corrugator scorelines on your sheets using ScoreChek™

Using innovative ShadowChek™ camera technology, ScoreChek automatically images the sheet to highlight the scorelines for analysis. Scoreline position can then be accurately verified in order to determine the blanks are being fed correctly and the scores are within tolerances

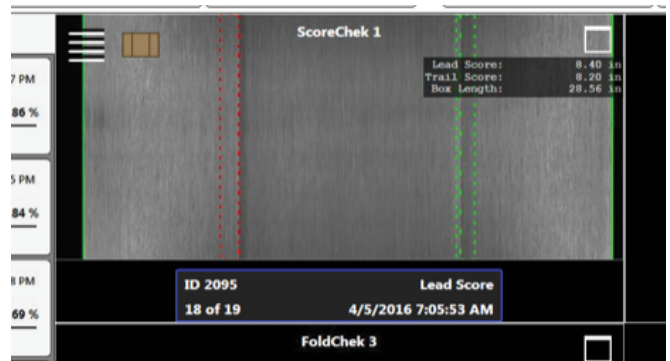

ScoreChek is part of ClearVision's range of quality assurance systems and interfaces with its BoxChek 7 platform, which allows for simultaneous operation of up to six camera inspection systems.

## Benefits

Any plant that produces corrugated packaging can expect the following benefits from using ScoreChek:

- Detect and analyze corrugator scorelines at working speeds up to 400 m/min at 7 boxes/sec
- Identify and reject sheets fed upside down or reversed
- Adaptable to up-fold and down-fold machines
- Guarantee box quality by ensuring the presence and position of scorelines
- Works for flexo-folder-gluers

## Identify & Record Defects From a Touchscreen

- Red Highlights: Indicate any missing, or incorrect scoring on the corrugated sheet
- Green Highlights: Indicate proper scoring

ScoreChek records all of the detected defects and stores them for later use in stats reports.
